INDEX: VOLUME 20

AUTHORS AND SUBJECTS

About the authors 75–76, 143–144, 210–211, 270–271, 341–342.
Alexander, Richard D. The search for a general theory of behavior, 77–100.
Alperson, Burton L. In search of Buber's ghosts: A calculus for interpersonal phenomenology, 179–190.
Alt, J. E., & Schofield, N. CLIQUE: A suite of programs for extracting cliques from a symmetric graph, 134–135.
Assignment, bilateral preference 166–173.
Bailey, Robert: see Anthony Palmer.
Bargaining dyads 157–165.
Bavelas, Janet Beavin. Systems analysis of dyadic interaction: The role of interpersonal judgment, 213–222.
Behavior, general theory. 77–100.
Behavior theory, general systems 343–365.
Book Reviews:
- Nowakowska, Marie: *Language of Motivation and Language of Actions.* (Toshio Iritani, rev.) 339–340.
- Robertson, Leon S., & Haegarty, Margaret. C: *Medical Sociology, A General Systems Approach.* (Jessie L. Miller, rev.) 338–339.
- Rubin, Milton: *Systems in Society.* (Ervin Laszlo, rev.) 140–142.
- Shubik, Martin: *Games for Society, Business and War: Toward a Theory of Gaming.* (Howell R. Porter, rev.) 268–269.

Borda rule 331–337.
Buber's ghosts 179–190.
Buckingham, Paul: see David W. Conrath.
Campbell, Richard: see Louis N. Gray.
Cassidy, R. Gordon. Urban housing selection, 241–250.
Coalition: triads 174–178; two-person 241–250.
Communication system for medical diagnosis 296–305.
Compliance, threats and promises 117–124.
Computer programming, CLIQUE 134–135.
Condorcet rule 125–133, 331–337.
Conrath, David W., Buckingham, Paul, Dunn, Earl V., & Swanson, J. Norrie. An experimental evaluation of alternative communication systems as used for medical diagnosis, 296–305.
Control systems and teleological systems 325–330.
Critical subsystems, society 366–535.
Crowd fluids, Maxwell-Boltzmann distribution 223–227.
Cybernetic and teleological systems 325–330.
Cybernetic paradigm, limits 191–200.
Decision making, two-person bargaining 157–165.
Decision systems 34–46.
Diagnosis: see specific types.
Dunn, Earl V: see David W. Conrath.
Dyadic interaction 213–222.
Ecosystem simulation 68–74.
Election systems: see voting systems.
Environmental engineering, systems approach 306–324.
Environmental Protection Agency: 57–67.
Feedback, manipulating 101–116.
Favreau, R. R., & McLeod, John, CAL-1: A modeling tool for nonprogramers, 136–139.
Games: prisoners dilemma, 117–124, 201–205, 206–208, 209.
Gärdenfors, Peter. Match making: Assignments based on bilateral preferences, 166–173.
Gavin, James F., & Howe, John G. Psychological climate: Some theoretical and empirical considerations, 228–240.
General system: model, organization 145–156; theory 9–24.
General systems behavioral theory 343–365.
Gerard, Ralph Waldo. (Memorial) 1–8.
Goal setting and performance scores 213–222.
Good, I. J., & Mayer, Lawrence S. Estimating the efficacy of a vote, 25–33.
Gray, Louis N., & Campbell, Richard. Statistical significance of the Lambda coefficients: A comment, 258–259.
Groups, interaction in 179–190.
Horai, Joann, & Tedeschi, James T. Compliance and the use of threats and promises after a power reversal, 117–124.
House, Peter W., Livingston, Robert C., & Swinburn, Carol D. Monitoring mankind: The search for quality, 56–67.
Housing selection, urban 241–250.
Howe, John G.: see James F. Gavin.
Hypotheses, society 366–535.
Innis, George. One direction for improving ecosystem modeling, 68–74.
Interaction, university-community 273–295.
Interpersonal: judgment 213–222; phenomenology, Boolean analysis 179–190.
Intersystem generalization 343–365.
Klapp, Orrin E. Opening and closing in open systems, 251–257.
Lambda coefficients 258–259.
Laszlo, Ervin. The meaning and significance of general system theory, 9–24.
Learning and performance, children, 101–116.
Levenglick, Arthur. Fair and reasonable election systems, 34–46.
Living systems: critical subsystems 343–365; society 366–535.
Livingston, Robert C.: see Peter W. House
Majority rule 125–133.
Malone, Thomas W. Computer simulaton of two-person interactions, 260–267.
MANOVA, psychological climate 228–240.
Mathematical modeling 24–33, 34–46.

Match making 166–173.
Mayer, Lawrence S.: see I. J. Good.
McHale, John. Man plus, 47–55.
McLeod, John. Editor's comment, 55–56; see R. R. Favreau.
McClintock, Charles G., & Van Avermaet, Eddy. The effects of manipulating feedback upon children's motives and performance: A propositional statement and empirical evaluation, 101–116.
Memorial: Ralph Waldo Gerard, 1–8.
Metagame theory 201–205, 206–208, 209.
Medical diagnosis in remote areas 296–305.
Miller, James G. Living systems: The society, 366–535.
Miller, James G. The nature of living systems, 343–365.
Miller, James G., & Rapoport, Anatol. Ralph Waldo Gerard, 1–8.
Miller, Jessie L.: see Kenneth J. Vandevelde.
Model: dyad interaction 260–267; economic, California 136–139; ecosystem 68–74; housing selection 241–250; organizational change 145–156; social decision 157–165; theoretical, psychological climate 228–240.
Models and simulations, society 366–535.
Motivation and performance, feedback in 101–116.
Organizational theory 145–156.
Palmer, Anthony, & Bailey, Robert. Sex differences and the statistics of crowd fluids, 223–227.
Paris, David C. Plurality distortion and majority rule, 125–133.
Payoff distribution, coalitions 174–178.
Performance scores and goal setting 213–222.
Preference assignment 166–173.
Prisoner's dilemma and metagames 201–205, 206–208, 209.
Process, society 366–535.
Psychological climate and organizational climate 228–240.
Punwani, Prem A.: see Douglas B. Simpson.
Quality of life, measuring 57–67.
Rapoport, Anatol. Some comments on "Prisoner's dilemma: Metagames and other solutions," 206–208; see James G. Miller.
Reciprocity continuum 77–100.
Richelson, Jeffrey. A Comparative analysis of social choice functions, 331–337.
Risk, pressure and coalition behavior 174–178.
Robinson, Mike. Prisoner's dilemma: Metagames and other solutions, 201–205.
Robinson, Mike. Reply to Anatol Rapoport, 209.
Schofield, N.: see J. E. Alt.
Sex differences, crowd fluids 223–227.
Simon, Thomas W. Control systems and teleological systems, 325–330.
Simpson, Douglas B., & Punwani, Prem A. The effect of risk and pressure on coalition behavior in a triadic situation, 174–178.
Simulation: computer 136–139, 260–267; societal control 55–56; two-person interactions 260–267.
Social choice functions, comparative analysis 331–337.
Societal problems 47–55.
Society and environment 306–324.
Structure, society 366–535.
Subsystem-component relationships, society 366–535.
Subsystems, society 366–535.
Sutherland, John W. System theoretic limits on the cybernetic paradigm, 191–200.
Swanson, J. Norrie: see David W. Conrath.
Swinburn, Carol D.: see Peter W. House.
System: analysis, urban grant university 273–295; philosophy 9–24; processes, society 366–535; theory, cybernetics 191–200, general principles 9–24.
Systems approach, environmental engineering 306–324.
Systems: open 251–257; purposeful 325–330; runaway 47–55; types of 343–365.
Telecommunications in medicine 296–305.
Tedeschi, James T.: see Joann Horai.
Testing alternative communications for medical diagnosis 296–305.
Thompson, Mark. A systems approach to environmental engineering, 306–324.
Toronto, Robert S. A General systems model for the analysis of organizational change, 145–156.
Two-person interactions, computer simulation 260–267.
Urban grant university 273–295.
Van Avermaet, Eddy: see Charles G. McClintock.
Vandevelde, Kenneth J., & Miller, Jessie L. The urban grant university: A systems analysis, 273–295.
Voting: efficacy 25–33; paradox 125–133; systems 24–33, 34–46; simple majority rule 331–337.
Wadington, James. Social decision schemes and two-person bargaining, 157–165.
